PEI RATING

FROST RESISTANT

SLIP RESISTANCE

PEI 1 Wall applications.

PEI 2 Light residential traffic with no direct access from the exterior such as bathrooms.

PEI 3 Residential light to moderate traffic such as living rooms.

PEI 4 Residential and Light Commercial Traffic such as residential kitchens, hallways and home entrances..

COEFFICIENT OF FRICTION

The coefficient of friction of tiles varies depending on the nature of the surface of the tile, whether the surface is dry or wet, and results differ for different types of shoe material and for barefoot applications.

Requirements also vary depending on the nature of the flooring application and the size of the floor area and its intended use.

Coefficient of friction values higher than those needed for many types of domestic applications may be desirable for large flooring areas, industrial and commercial applications and ramps, especially those connected immediately to the outside, than for many types of domestic applications.

Test are performed on tiles prior to installation. The coefficient of friction of any floor covering in use, including tiles, can be adversely affected by inadequate or improper maintenance, such as the use of unsuitable cleaning materials.

An outdoor patio area featuring a white modular sofa with various patterned and solid-colored cushions. In front of the sofa is a black, low-profile coffee table with a brown top. The background wall is made of light-colored ceramic tiles with a wood-grain texture. The patio is surrounded by trees and greenery.
